Note:

1. This app can be found in " ..\Qtasnim Digital Teknologi\bin\Debug\net8.0-windows", app name is "Qtasnim Digital Teknologi.exe". Recommend using Visual Studio 2022
2. You need to change server name and database name on "App.config". File Location is " ..\Qtasnim Digital Teknologi" and you can open with notepad or else.
3. This Software use C# Language and Entity Framework.
4. My design is using Code First Approach, so if you use new server or new database, you can use my code for initial migration. If you use existing server or database, you can open it directly
5. This app is design for **SQL SERVER**, if you want to use another server you need to add some code on "ApplicationDbContext.cs" on Data folder
6. This app can add data, fetch data, update data, and delete data from server.
7. App also can fetch and send data to and from external Url.
